

10 Scientific Studies That Prove Consciousness Can Alter Our Physical Material World!

Nikola Tesla said it best, “the day science begins to study non-physical phenomena, it will make more progress in one decade than in all the previous centuries of its existence. To understand the true nature of the universe, one must think it terms of energy, frequency and vibration.” *Swami Vivekananda* influenced *Tesla*’s work, an Indian Hindu monk and chief disciple of the 19th century saint *Ramakrishna*. *Tesla* was also influenced by other Vedic philosophies.

Science works best when in harmony with nature. If we put these two together, we can discover great technologies that can only come about when the consciousness of the planet is ready to embrace them, like [free energy](#).

I want to make it clear that my intention of presenting this information is to demonstrate that thoughts, intentions, prayer and other units of consciousness can directly influence our physical material world. Consciousness can be a big factor in creating change on the planet. Sending thoughts of love, healing intent, prayer, good intention, and more can have a powerful influence on what you are directing those feelings towards. Fukushima for example, if a mass amount of people send their thoughts and good intention to our waters, we can help mitigate the situation. These concepts can be used on a mass scale as one human race with one intent in their hearts, for multiple problems, as well as individual situations in our own lives. When our consciousness starts to merge into one as a collective, and we all start to see through the same eyes, we will begin to transform the world around us. I believe we are currently in this process.

For quite some time now, physicists have been exploring the relationship between human consciousness and its relationship to the structure of matter. Previously it was believed that a Newtonian material universe was the foundation of our physical material reality. This all changed when scientists began to recognize that everything in the universe is made out of energy. Quantum physicists discovered that physical atoms are made up of vortices of energy that are constantly spinning and vibrating. Matter, at it’s tiniest observable level, is energy, and human consciousness is connected to it, human consciousness can influence it’s behavior and even re-structure it.

“Everything we call real is made of things that cannot be regarded as real” – Niels Bohr

“The hypothesis of modern science starts from matter as the basic reality, considering space to be an extension of the void. The phenomenon of creation of stable cosmic matter, therefore, goes beyond the scope of present science. The theory also neither pinpoints the source of cosmic energy that resides in the structure of matter, nor can it explain the cause of material properties that are experienced with the behavior of matter. These are, in brief, the limitations of modern scientific theories at the most basic level of the physical phenomena of nature. When a scientific theory cannot cope with the question of the very origin of the universal matter and energy, how could it ever grasp and explain the phenomenon of consciousness which is evident in living beings?” – Paramahansa Tewari ([link](#))

The revelation that the universe is not an assembly of physical parts, but instead comes from an entanglement of immaterial energy waves stems from the work of *Albert Einstein*, *Max Planck* and *Werner Heisenberg*, amongst others.

1. The Quantum Double Slit Experiment

The quantum double slit experiment is a great example of how consciousness and our physical material world are intertwined. One potential revelation of this experience is that *"the observer creates the reality."* A paper published in the peer-reviewed journal Physics Essays explains how this experiment has been used multiple times to explore the role of consciousness in shaping the nature of physical reality.

[\(link\)](#)

In this experiment, a double-slit optical system was used to test the possible role of consciousness in the collapse of the quantum wave-function. The ratio of the interference pattern's double slit spectral power to its single slit spectral power was predicted to decrease when attention was focused toward the double slit as compared to away from it. The study found that factors associated with consciousness significantly correlated in predicted ways with perturbations in the double slit interference pattern. [\(link\)](#)

For visual demonstration of this experiment, click [here](#).

"Observation not only disturbs what has to be measured, they produce it. We compel the electron to assume a definite position. We ourselves produce the results of the measurement." [\(link\)](#)

"A fundamental conclusion of the new physics also acknowledges that the observer creates the reality. As observers, we are personally involved with the creation of our own reality. Physicists are being forced to admit that the universe is a "mental" construction. Pioneering physicist Sir James Jeans wrote: "The stream of knowledge is heading toward a non-mechanical reality; the universe begins to look more like a great thought than like a great machine. Mind no longer appears to be an accidental intruder into the realm of matter, we ought rather hail it as the creator and governor of the realm of matter. Get over it, and accept the inarguable conclusion. The universe is immaterial-mental and spiritual." (R.C. Henry, "The Mental Universe" ; Nature 436:29,2005) [\(link\)](#)

2. Government Sponsored Psychokinesis Experiments

Psychokinesis, also known as PK, encompasses the possible influence of human consciousness on the behavior of physical or biological systems or processes, and comprises several loosely related classes of effect characterized by different scales of energy, forms of manifestation, replicability and statistical behavior. [\(link\)](#)

In 2004, a United States Air Force research project declassified a paper titled Teleportation Physics Study, authored by *Eric Davis*, Ph. D., showing that psychokinesis and other parapsychological phenomenon have been subject to rigorous research and documentation by several researchers and institutions.

One particular example was the work of professional aerospace engineer Jack Houck, along with Army Colonel J.B. Alexander. They were responsible for holding a number of PK sessions, where attendees were taught the PK induction process and how to initiate their own PK events using various metal specimens like forks and spoons. Individuals were able to completely bend or contort their metal specimens with no physical force being applied whatsoever. [\(link\)](#)

These events were held for government science advisors and senior military officials. They took place at the Pentagon, at officers' and scientists' homes, and at U.S Army Intelligence & Security Command locations all over the world. Commanding generals, colonels and more were always in attendance. What was witnessed by all was spontaneous deformation of metal specimens, which caused "a great deal of excitement" amongst those present.

"We will need a physics theory of consciousness and psychotronics, along with more experimental data, and discover the physical mechanisms that lay behind the psychotronic manipulation of matter." [\(link\)](#)

3. The Global Consciousness Experiment/Random Number Generators

The global consciousness experiment is an international, multidisciplinary project between multiple scientists and engineers. [\(link\)](#) [\(link\)](#) It originates from Princeton University, in conjunction with the Institute of Noetic Sciences. It collects data constantly from a worldwide network of physical random number generators located all over the planet. The data is transmitted to a home base, which now has more than 15 years of data stored in it.

“Our purpose is to examine subtle correlations that may reflect the presence and activity of consciousness in the world. We hypothesize that there will be structure in what should be random data, associated with major global events that engage our minds and hearts.”

RNGs are systems created by Princeton researchers that are sensitive to and respond to the intentions of individuals, in other words, the influence of consciousness. They also respond to marked shifts in attention occurring in their environment. Peaks of order are commonly recorded during moments of shared attention and emotions. RNGs also responded, and had the largest effects ever recorded by the Global Consciousness Project during major world events, like 9/11. [\(link\)](#)

Other large recordings have occurred on presidential inaugurations, tsunamis and the deaths of public figures. These findings stirred deep questions about the nature of consciousness and its connection to our physical material reality. You can read more about RNGs [here](#)

4. NSA/CIA Remote Viewing Experiments In Conjunction With Stanford University

Remote viewing is the ability of individuals to describe remote geographical locations up to several hundred thousand kilometers (even more) away. This concept has been proven, demonstrated and documented a number of times.

In 1995, the CIA declassified and approved the release of documents revealing its involvement in the program that lasted for more than 25 years. [\(link\)](#) [\(link\)](#)

Ingo Swann, one participant in this experiment was able to view specific rings around Jupiter before NASA was about to take pictures of it with their pioneer 10 craft. This was documented in the research.

Individuals were also able to view objects and people in separate rooms that were completely blocked off from their present physical location. The fact that some have/ had the capability to project their consciousness elsewhere from their present physical location is quite amazing.

These projects occurred for decades, while some of the mainstream world continued to view them as “pseudoscience,” the Department of Defense takes them extremely seriously, and keeps them extremely secret. This program was part of a program called “STARGATE” and was unexpectedly shut down. [\(link\)](#) You can read more about remote viewing [here](#).

5. Thoughts and Intentions Alter The Physical Structure of Water

Experiments over the past four decades have investigated whether human intention alone affects the properties of water.

This question has been around for a while in the alternative medicine realms, because the human body is made up of approximately 70% water. According to the Institute of Noetic Sciences, researchers have suggested that intentionally influenced water can be detected by examining ice crystals formed from samples of that water. Consistent results commonly point to the idea that positive intentions tend to produce symmetric, well-formed, aesthetically pleasing crystals, and negative intentions tend to produce asymmetric, poorly formed and unattractive crystals.

If thoughts and emotions can do this to water, just imagine what they can do to us.

Many people point out that this experiment was a fraud, but it’s been conducted multiple times and replicated by some highly respectable individuals in the field of science. The paper I am citing here is from *Dean Radin*, who has published multiple research papers in peer-reviewed journals. The experiment was conducted at the Institute of Noetic Sciences and Adjunct Faculty in the Department of Psychology at Sonoma State University. [\(link\)](#)

You can read more about this experiment [here](#)

This also correlates with a study that examined the role of intention and belief on mood while drinking tea. It explored whether drinking tea “treated” with good intentions by monks would have an effect on mood more so than drinking ordinary tea. The study was done under double-blind, randomized conditions, and results proved positive. [\(link\)](#)

6. The Placebo Effect

It's been well documented that we can change our biology simply by what we believe to be true. The placebo effect is defined as the measurable, observable, or felt improvement in health or behavior not attributable to a medication or invasive treatment that has been administered. It suggests that one can treat various ailments by using the mind to heal. Many studies have shown that the placebo effect (the power of consciousness) is real and highly effective.

A Baylor School of Medicine study, published in 2002 in the New England Journal of Medicine, ([link](#)) looked at surgery for patients with severe and debilitating knee pain. Many surgeons know there is no placebo effect in surgery, or so most of them believe. The patients were divided into three groups. The surgeons shaved the damaged cartilage in the knee of one group. For the second group they flushed out the knee joint, removing all of the material believed to be causing inflammation. Both of these processes are the standard surgeries people go through who have severe arthritic knees. The third group received a "fake" surgery, the patients were only sedated and tricked that they actually had the knee surgery. For the patients not really receiving the surgery, the doctors made the incisions and splashed salt water on the knee as they would in normal surgery. They then sewed up the incisions like the real thing and the process was complete. All three groups went through the same rehab process, and the results were astonishing. The placebo group improved just as much as the other two groups who had surgery.

- See more at ([link](#)).

Another great example of the placebo effect came from the United States Department of Health and Human Services in 1999. The report discovered that half of severely depressed patients taking drugs improve compared to the thirty-two percent taking a placebo. Don't forget about all of the side effects and dangers that have been associated with antidepressants every year. Don't forget that the 'depression industry' alone is a multi-billion dollar one.

A 2002 article published in the American Psychological Association's prevention & treatment, by University of Connecticut psychology professor Irving Kirsch titled, "*The Emperor's New Drugs*," made some more shocking discoveries ([link](#)) ([link](#)). He found that 80 percent of the effect of antidepressants, as measured in clinical trials, could be attributed to the placebo effect. This professor even had to file a Freedom of Information Act (FOIA) request to get information on the clinical trials of the top antidepressants.

For more on the Placebo Effect, click [here](#).

7. Teleportation

“It became known to myself, along with several colleagues both inside and outside of government, that anomalous teleportation has been scientifically investigated and separately documented by the Department of Defense.”

A paper published in the Peoples Republic of China (PRC) in September 1981, in the journal Ziran Zazhi (Nature Journal) titled *“Some Experiments on the Transfer of Objects Performed by Unusual Abilities of the Human Body”* (Shuhuang et al., 1981) reported that ‘gifted children,’ were able to cause the teleportation of small, physical objects from one place to another. Objects included watches, horseflies, other insects, radio micro-transmitters, photosensitive paper and more. The participants never touched the objects beforehand. The experiments were done under both blind and double-blind conditions, and the researches involved came from various colleges and sectors of the Department of Defense. This is an exceptional case, because it was deemed necessary that an unclassified Intelligence Information Report be prepared for public viewing.

More research was done by the Aerospace Medicine Engineering Institute in Beijing, in July of 1990. It was published in the Chinese Journal of Somatic Science (Kongzhi et al., 1990; Jinggen et al., 1990; Banghui; 1990). This study reported several experiments involving high speed photography video taping, which was able to capture the transfer of test specimens like nuts, matches, nails, pills and more through the walls of sealed paper envelopes, sealed glass bottles and tubes, sealed plastic film canisters and more without the walls of any of these containers being breached. All of these experiments reported using gifted children and adults to cause the teleportation of various materials. ([link](#))

You can read more on teleportation [here](#)

8. The Science of The Heart

The heart generates the largest electromagnetic field produced in the body. Researchers have analyzed the spectrum analysis of the magnetic field that’s produced by the heart, and results have shown that emotional information is encoded into this electromagnetic field. So, by shifting our emotions, we are changing the information that is encoded into these electromagnetic field that are radiated by the heart. This can impact those around us. When we are feeling emotions of compassion, love, gratitude and understanding, the heart beats out a very different message. [HeartMath.org](#) / [.com](#)

9/10 And Beyond

There are numerous studies documenting how consciousness and our physical material reality are intertwined, in so many different ways, with many different examples like the ones listed above. I am going to leave you with a long list of selected peer-reviewed journal publications on Psi research. This involves anomalous processes of information or energy transfer, telepathy and other forms of unexplained phenomenon that have observable, repeatable outcomes in the lab.

Click [HERE](#) to continue your research on how consciousness and our physical material world are interconnected.

Consciousness plays a very important role in changing our planet. Just having these thoughts alone would contribute to the massive shift in consciousness that’s occurring. Find your inner peace, be peace, be love, acting and living your life from such a place plays a very important role in changing the world.
